MIE TRAK PRO USER CASE STUDY

MillerMetal Fabrication

2012 Entrepreneurial Success Award Winner

MillerMetal Fabrication started as a designer and manufacturer of specialized food processing equipment in 1995 but has grown into a high production, low-cost provider of metal components to multiple industries. They take pride in their high-quality, precision-based metal components, detailed project management, and quick turnaround of orders.

The addition of an ERP system combined their processes into one efficient, personalized database. After reviewing MIE Solutions and meeting founder David Ferguson and his team in 2004, MillerMetal implemented MIE Trak Pro. MillerMetal Fabrication founder Martin (Marty) Miller has remained a partner of MIE Solutions and has continued to see company success and growth.

> "Since implementing MIE Trak Pro, our revenue has increased 18-fold and our company has grown over 1,000%."
>
> **Michael Elehway**
> CFO

Challenges

- Moving toward high production with several divergent software systems
- A small company that wanted to grow
- Low budget, high need

Solutions

- ERP software that keeps all their data in one place
- MIE Trak Pro was an affordable option for their growing business and combined their divergent systems into one, helping them focus on growth instead of repetitive data entry and manual methods

Value Added

- Improved material tracking throughout the plan
- Efficient tracking of shipments
- Better nesting of materials
- Lower rejects of shipped materials and overall improved turnaround time
- Cost-effective software for their growing business
